Rishikesh Reddy Regatte

Data Engineer | AWS · dbt · Databricks | ELT Pipelines, Data Modeling & LLM Applications

Charlotte, NC | rishikeshreddyregatte@gmail.com | linkedin.com/in/rishikeshregatter/ | github.com/rishikesh-20

PROFESSIONAL SUMMARY

Data Engineer experienced in building production ELT pipelines and data models with Python, SQL, Airflow, dbt, and PostgreSQL, and in delivering AI applications with RAG, LLM evaluation, and text-to-SQL. M.S. Computer Science (4.0 GPA), AWS Certified.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, PySpark), SQL (PostgreSQL), Java, JavaScript
Data Engineering: Apache Airflow, Airbyte, dbt, Databricks, Apache Spark, Delta Lake, DuckDB, ETL/ELT, Incremental Loads, Dimensional Modeling, Data Warehousing, Data Quality
AI & LLM Engineering: RAG, LangChain, Pinecone, Prompt Engineering, LLM Evaluation (RAGAS), Text-to-SQL, MCP, XGBoost, Scikit-learn, MLflow
Cloud & DevOps: AWS (S3, Glue, Redshift), GCP (BigQuery, Cloud Storage), Docker, Git, GitHub Actions (CI/CD)
BI & Tools: Metabase, Power BI, Streamlit, DBeaver, Unity Catalog, Databricks Asset Bundles, REST APIs
Certifications: AWS Data Engineer | Anthropic: Claude Code in Action | IBM: Python for Data Science | IBM: ML with Python

EXPERIENCE

Kastech Technologies — **Telangana, India**
Data Engineer I — *September 2023 – December 2024*

- Replaced manual CSV exports with an Airbyte and Python REST API ingestion framework loading 5M+ records from 12 HR, finance, and sales sources into Amazon S3 and PostgreSQL via daily Airflow DAGs, cutting finance reporting prep 75%.
- Drove migration of 15+ legacy SQL scripts to dbt Core (4-phase plan) with dev/prod environments and test-based validation, converting full-refresh loads into incremental models that cut runtime 50%+; diagnosed a 3× database load spike via query-level analysis in DBeaver and added indexes, avoiding a planned server upgrade (~$3K/year).
- Owned 17K+ Airflow task runs at 99.5% SLA attainment with retries and alerts, and shipped 40+ dbt tests that flagged 30+ duplicate-key anomalies in 45K+ monthly attendance records, saving 3+ hours/week.
- Developed star-schema dbt marts (staging, fact, dimension) replacing a 400-line monthly close script, powering Metabase dashboards for 40+ HR, finance, and sales stakeholders, accelerating reporting 82% and cutting ad hoc requests ~60%.

PROJECTS

LLM Prompt Benchmark | *Python, Qwen3-14B, Gemini, RAGBench, BigQuery*

- Built a local LLM evaluation harness benchmarking 5 prompting strategies across 150 RAGBench samples (750 Qwen3-14B generations), scored by a Gemini RAGAS-style judge for faithfulness, relevancy, and hallucination rate.
- Showed RAG reduced hallucination from 68.7% to 10.5% vs. zero-shot; structured RAG reached 91.2% faithfulness while zero-shot scored 86% relevancy at only 31.3% faithfulness, revealing grounding and relevancy as independent axes.
- Engineered a resumable runner with skip logic and atomic JSON checkpoints, plus a Streamlit dashboard and optional GCP export to BigQuery and Cloud Storage for downstream reporting.

SEC Filing Intelligence Lakehouse | *Databricks, Delta Lake, SQL, XGBoost, MLflow*

- Architected a production-style Lakehouse and MLOps platform on Databricks to ingest, transform, and model SEC financial data for S&P 500 companies using Delta Lake, Unity Catalog, and Databricks Asset Bundles.
- Designed leakage-safe feature engineering pipelines with chronological validation and MLflow experiment tracking, optimizing a calibrated XGBoost model to 0.663 ROC-AUC and 62% accuracy.
- Operationalized end-to-end model deployment with automated batch scoring, champion model versioning, AI/BI dashboards, and peer clustering (Silhouette Score: 0.75) for scalable financial intelligence.

Conversational Deductive Query Assistant | *Python, SQL, Streamlit*

- Developed a natural-language-to-SQL application letting users query relational databases in plain English via AI-generated SQL.
- Improved query generation accuracy by 35% through schema validation and structured prompt refinement.
- Built interactive Streamlit dashboards with tabular and visual outputs to accelerate exploratory data analysis.

Medbot | *LLM, Python, LangChain, Pinecone*

- Designed and developed an AI-powered medical chatbot delivering context-aware health information using LangChain, Grok API, and Retrieval-Augmented Generation (RAG).
- Integrated a Pinecone vector database for semantic search, improving retrieval accuracy and cutting irrelevant responses 40%+.
- Developed an interactive Streamlit interface with secure API integration, enabling real-time querying.

EDUCATION

University of North Carolina at Charlotte — **North Carolina, United States**
Master of Science in Computer Science – GPA: 4.0 — *January 2025 – December 2026*

Hyderabad Institute of Technology and Management — **Telangana, India**
Bachelor of Technology in Computer Science – GPA: 3.6 — *August 2020 – August 2024*
